Odoo Implementation Business Plan

Oct 30, 2026 · @Basma

A to Z Trading Company will implement Odoo in eight phases, from defining the business problem to final delivery, so one system runs sales, purchasing, manufacturing, inventory, accounting, POS, CRM and HR.

Phase 1: Business Problem

Company: A to Z Trading Company, a furniture manufacturer and retailer selling through showrooms, wholesale and project contracts.

Objectives of using Odoo

- Replace spreadsheets and disconnected tools with one integrated system.
- Track raw materials and finished goods accurately across warehouses.
- Know the real cost and margin of every product.
- Monitor production orders and delivery dates.
- Follow up leads and customers in one place.
- Close the books faster and manage employees and payroll in the system.

Customers and suppliers

- Customers: individual home buyers, offices and companies, wholesale and project clients.
- Suppliers: wood and boards, fabrics and upholstery, hardware and accessories, packaging.

Departments: Sales, Purchasing, Warehouse, Manufacturing, Accounting, HR and Showrooms (POS). Every module these departments need will be set up in Odoo.

Phase 2: Business Analysis

Each business process is mapped step by step before any configuration starts.

Process	Flow in Odoo
Sales	Quotation → Sales Order → Delivery → Invoice → Payment
CRM	Lead → Opportunity → Quotation → Won or Lost

Process	Flow in Odoo
Purchasing	RFQ → Purchase Order → Receipt → Vendor Bill → Payment
Manufacturing	Bill of Materials → Manufacturing Order → Raw-material consumption → Finished goods in stock
Point of Sale	Open session → Showroom sale → Payment → Close session
Inventory	Receipt → Storage → Internal transfer → Delivery, with reordering rules
Accounting	Invoices and bills → Payments → Bank reconciliation → Financial reports
HR	Employee record → Attendance and time off → Payroll

Phase 3: Project Scope

The scope is listed module by module.

Odoo module	Scope
Inventory	Products and variants, warehouses, receipts and deliveries, reordering rules, stock valuation
Manufacturing	Bills of materials, manufacturing orders, work centers, product costing
Purchase	RFQs, purchase orders, vendor management, matching receipts with bills
Sales	Quotations, sales orders, pricelists, discounts, variants by color, size and material
CRM	Leads, pipeline stages, activities and follow-ups, performance reports
Point of Sale	Showroom sessions, cashiers, payment methods, real-time stock sync
Accounting	Chart of accounts, invoices, payments, taxes, bank reconciliation, financial statements

Odoo module	Scope
HR	Employee records, attendance, time off, payroll, appraisals

Out of scope for now: eCommerce website, mobile app and custom modules.

Phase 4: Work Breakdown

1. Create the company and configure general settings.
2. Configure Inventory and Purchase.
3. Configure Manufacturing (bills of materials, work centers).
4. Configure Sales, CRM and POS.
5. Configure Accounting (chart of accounts, taxes, journals).
6. Configure HR, users and access rights.
7. Import master data.
8. Test and validate each business process.
9. Prepare the final delivery.

Phase 5: Responsibility

The weeks and roles below are proposed; replace them with real dates and names.

Task	Person responsible	Start date	Due date
1. Company and general settings	Project manager	Week 1	Week 1
2. Inventory and Purchase	Warehouse and purchasing leads	Week 2	Week 3
3. Manufacturing	Production manager	Week 3	Week 4
4. Sales, CRM and POS	Sales manager	Week 3	Week 4
5. Accounting	Accountant	Week 4	Week 5
6. HR and access rights	HR officer	Week 4	Week 5
7. Master data import	Department heads	Week 5	Week 6
8. Testing and validation	All teams	Week 6	Week 7

Task	Person responsible	Start date	Due date
9. Final delivery	Project manager	Week 8	Week 8

Phase 6: Implementation

- **Database:** create the Odoo database and install the required modules.
- **Settings:** company details, currency, taxes, warehouses, users and access rights.
- **Data:** import customers, suppliers, products, bills of materials, employees and opening balances.

Phase 7: Validation and Testing

Each team tests its own module separately, then all teams test the full cycle together.

- Confirm every business process runs in Odoo as mapped in Phase 2.
- Run an end-to-end case: quotation, manufacturing, delivery, invoice, payment.
- Log issues, fix them and retest.

Phase 8: Final Delivery

- Project plan (this document).
- Odoo screenshots for each business process.
- Presentation.
